

Render Notification Bot

1. Download zip file with the add-on from the a source.

2. Install the add-on in the Edit-Preferences-Add-on section of the Blender.

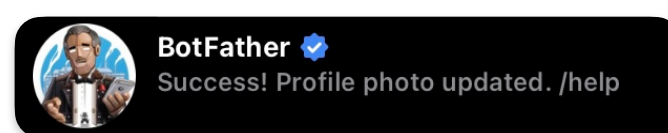

3. After you enable it you should see two placeholders in the add-on preferences first for Bot Token and second for the ChatID. Paste your Token and ID to these placeholders, and you're good to go.

Step One:

Creating a Telegram bot with BotFather:

1. Open the Telegram app and search for "BotFather" in the search bar.

or press this button to open it in web browser

2. Start a chat with BotFather by sending "/start".

3. Send "/newbot" to BotFather to create a new bot.

4. Follow the prompts from BotFather to choose a name and username for your bot. Note that the username must end in "bot".

5. Once the bot is created, BotFather will send you a token. This token is used to authenticate your bot and send messages to it.

Step Two:

Obtaining your chatID with userinfobot:

1. Open the Telegram app and search for "userinfobot" in the search bar.

or press this button to open it in web browser

2. Start a chat with userinfobot by sending "/start".

3. userinfobot will reply with your chatID, which is a long number that identifies your Telegram account.

Congratulations you successfully create your telegram bot and now should have your Bot Token and ChatID, all you left to do is to paste them to the placeholders in preferences of the add-on in order to receive notifications from Blender.
